Juniper and Cisco Routing: Policy and Protocols for Multivendor IP Networks

By Walter J. Goralski

Juniper and Cisco Routing: Policy and Protocols for Multivendor IP Networks By Walter J. Goralski

- Discusses how network traffic flow is complicated by the fact that each routing vendor has its own propietary implementation or extension to the routing protocols.
- Covers both Juniper and Cisco routing, and touches on other vendor implementations.
- Focuses on routing policy, covering Border Gateway Protocol in depth.
- Includes real-world multivendor configuration examples.

Editorial Review

From the Back Cover
Obtain a clear understanding of how routing information and traffic flows on a multivendor network

Routing policies for networks are often complex and not well understood. Many books detail the operation of routing protocols such as OSPF or BGP, but none place the protocols in the context of routing policies and the real world of ISP peering and customer relationships. Once realistic expectations of packet routing behavior are added to the basic routing protocols, routing policies are unavoidable. Fortunately, Walter Goralski sheds some much-needed light on this intricate protocol-policy relationship by offering two important benefits where other routing books fall short.

Goralski covers both Juniper and Cisco, and touches on other vendor implementations. Next, he focuses on real routing policy situations-the way routing domains actually work-instead of just detailing the protocol anatomy. Real-world multivendor configuration examples make this a hands-on guide for the network engineer or administrator who needs to optimize network traffic flows.

Topics covered include:
* Addressing and routing
* Subnets and supernets
* ISP peering and routing policies
* Cisco and Juniper Networks router configuration
* Routing Information Protocol (RIP)
* Configuring RIP, OSPF, IS-IS, and BGP
* Routing policies for all networking situations

About the Author
WALTER J. GORALSKI is an instructor and course developer at Juniper Networks, the number-two vendor of network routing products. Goralski has more than 35 years of experience in data communications, including 14 years at AT&T. He has written seven books on networking topics, the most recent one on optical networking.
